

DANDI:000022: Allen Institute - Visual Coding - Neuropixels (Functional Connectivity Stimulus Set)

Comparison with the Allen Brain Observatory's own tables (computed by this export; files in original_files/allen_ecephys_cache): across 000021 + 000022 the NWB files contain 136,556 units, and Allen's units.csv lists 135,275, all of which are in the NWB files. 1,281 NWB units in 50 sessions are not in units.csv. On the 135,275 shared units, the NWB electrode location and Allen's channels.csv ecephys_structure_acronym agree for 99.0%.

Scope of this export (computed by this export): the units, electrodes and intervals tables of every NWB file (session files; the per-probe LFP files were skipped) were read remotely from the DANDI Archive; voltage, LFP, video and other time series were not downloaded.

Source labels: **DANDI metadata** = the Dandiset's published metadata; **NWB file** = values or text stored in the NWB files; **Computed by this export** = derived by the export scripts in dandi_export/ (definitions given where used).

Description (DANDI metadata, verbatim)

Allen Institute October 2019 Mouse extracellular electrophysiology data, collected under analogous conditions to the two-photon Brain Observatory imaging experiments, with mice shown a subset of stimuli with a higher number of repeats.

4. Units per region (Computed by this export)

5. All region labels (Computed by this export)

One row per region label exactly as stored in the NWB files, all units (no quality filter), sorted by unit count. Firing-rate columns summarise the NWB units.firing_rate values where the dataset provides them.
