

DANDI:001637: Allen Institute OpenScope - Predictive Processing (Ecephys)

Region assignment (computed by this export): each unit lists all channels of its probe. The region is the electrode location at `units.electrodes[extremum_channel_index]`, which every file provides.

Scope of this export (computed by this export): the units, electrodes and intervals tables of every NWB file were read remotely from the DANDI Archive; voltage, LFP, video and other time series were not downloaded.

Source labels: **DANDI metadata** = the Dandiset's published metadata; **NWB file** = values or text stored in the NWB files; **Computed by this export** = derived by the export scripts in `dandi_export/` (definitions given where used).

4. Units per region (Computed by this export)

5. All region labels (Computed by this export)

One row per region label exactly as stored in the NWB files, all units (no quality filter), sorted by unit count. Firing-rate columns summarise the NWB units.firing_rate values where the dataset provides them.
